Use Case: Create Game

Main Flow

1. The customer selects Create Game from the main menu.
2. The system shows the list of available teams to play, indicating the **name** of the team, **name and surname of the** captain, **number of members**, **minimum age, maximum age** and **sport name** (that is unique).
3. The user selects the teams to be invited to participate in the game and selects the Confirm option.
4. The system shows the information of the selected teams (**name and surname of the** captain, **number of members**, **minimum age, maximum age** and **sport name**).
5. The system requests the user to introduce the following mandatory information about the game: **name** (unique) of the game, **date** and **time** (later than today) and **place** (more than 5 chars) where it will be played and a **message** (more than 10 characters) of the request for each one of the involved teams. It will also request as optional data a **description** of the game.
6. The user fills in such data and chooses the Confirm option.
7. The system shows a message with all the information about the game created: name of the game, sport, date, place and time as well as its description. It also includes the information of all the teams invited (Name, captain, number of members, minimum age, maximum age, sport and the request message to join the game).

Alternative flow 1 - to step 2

If the system detects that there are not available teams, it notifies the user.

Alternative flow 2 - to step 2

2.1 The system offers the users the alternative to filter the teams according to their captain's name **and** their sport (by default one of the registered sports is used).
2.2 The user selects those filters he is interested in.
2.3 The system shows those teams that satisfied only the selected filters.

Alternative flow 3 - to step 7

If the user does not select at least the **minimum number of teams** that the **sport** requests, the system shows an error message and asks the user to return to step 2 to select additional teams.

Alternative flow 4 - to step 7

If the user is not the captain of at least one of the selected teams, the system shows an error message because the user has no permission to perform this action.

Alternative flow 5 - to step 7

If the system detects that any mandatory data has not been filled or do not satisfy the conditions, the system notifies the user to correct such error.

Pre-condition

The customer must be logged in the system to start the use case.

Post-condition

The user becomes the responsible of the game and will mark the invitations to the game as pending.
